

# Lesson 1 Year 6 | Female Sexual Organs

**Vulva** - The parts of female genitalia that can be seen from the outside.

**Vagina** - A stretchy tube-shaped muscle. A baby is born out of the mother's body, through the vagina.

**Ovaries** - Two small sacks, inside the body that are roughly the size of a large strawberry. They contain the eggs.

**Fallopian tubes** - The tubes that lead from the ovaries to the uterus. Once a month when an ovary releases an egg, it travels down the fallopian tube to the uterus.

**Uterus** - The uterus looks like a small, upside-down pear. It is made of strong muscles and is hollow inside. The uterus leads to the vagina.
